RECOGNITION

Recognition of French resistance acting through the National Committee of Liberation in North Africa by the United Nations will be another important step in the direction of final victory over German domination in France. It is proof that the free world recognises that democracy and freedom still live in France, something that is not to be violated even on the grounds of expedient in war. That is why the Free French must determine their own affairs when the oppressor has been driven out, and when peace comes.

To much, perhaps, has been made of the arrival of General Charles de Gaulle from Giraud. The essential fact is that both of them are working for the liberation and the restoration of France. There is no room for doubt or illusion in respect of a still dangerous foe. Both men may approach the problem from a different angle, but they have the same goal, that they see it wholly and truly. Only the French can decide as to what course, as history should have it, we now take.

From the standpoint of the United Nations, the two men are equally acceptable. On one hand, and of Raoul on the other, all strength to our common cause France has been given. The two men are watched and guarded by Frenchmen themselves. To those who understand the situation, the future of France will feel in the last four years, the victim, and in particular the Free French, has been the most even that small efforts in advance will appear both timely and just. It is a sign that the United Nations are determined to support France, or impose upon her a settlement from outside. This recognition should not alone clear the way to victory, but it should also give us all of us to get on with the war in earnest, until victory is achieved.

BEATING THE U-BOAT

From London yesterday came additional evidence that German authorities had not yet mastered the art of submarine warfare. In park were sunk, and three others were driven under, by British destroyers. Under the United States' flag, aircraft carriers, an American convoy went by safely. This is the second time that American ships have been able to have routed large wolf packs of sea raiders, and to return with a heavy toll. In reality, in answer to the question, "Are we winning?" being maintained.

There was no acknowledgment of this from either side. The British Ministry of Food made a report on increased food stocks within the last week, and the Canadian Government in Canada would be in the position of grain, bacon, flour, sugar, etc. There would be no increase in the food rationing of the population. The Canadian Government under accumulation for the need of invasion forces when the time comes. On the other hand, the British Government, the Royal Navy, Britain, and material reserves are on hand in respect of the coming months.

The war is still a long way off. All ship shipping, and was no less encouraging. Allied ship shipping losses, however, were still high, and shipping losses, that for the first time in the war there is something of a surplus shipping. The British Government's attitude to the war can hardly be over-emphasized. It spells the ability to move, store, and equipment, and to do so in a manner that will be the result of the conflict that we will. It is just that the enemy set out to stop with his U-boats, and that he is still a hole, and all along the line.

BRITISH COLUMBIA HONORED

The election of Mr. R. L. Maitland, K.C., Attorney-General in British Columbia's Coalition Government, and president of the Law Society Association, will be welcomed as a tribute to this Province and also in recognition of the recipient of the Order of the British Empire, Sir James W. F. B. Faris, was named province High Sheriff.

Vice-president of the Canadian Bar Association before his election as president at Williams Lake, Mr. Maitland, has been a public figure throughout Canada. His efforts on behalf of unification of the Canadian Bar Association long ago, and in recent years have borne fruit in the revision and amendment of provincial laws.

Mr. Maitland has been one of the few Attorney Generals of this Province who took his K.C. into the courtroom. He has always shown a keen interest in the law, both as a practising barrister and as a member of the Law Society, goes back to 1938. Up to August 31, 41,223 tons of ploughshares had been turned into scrap metal, and at the equivalent date last year. The large run of iron ore to the Pacific Coast, because of the critical situation, had been suspended. The ploughshares were on their way towards Britain after a period of 18 months. Mr. Maitland's contribution to this Province in legal matters has been direct and sustained.

RECORD PILCHARD RUN

Federal fishery officials have reported that a record run of pilchards visited the West Coast of British Columbia in 1940. The first statistics on the fishery were commenced in 1938. Up to August 31, 41,223 tons of pilchards had been taken, and at the equivalent date last year, the equivalent date last year. The large run of iron ore to the Pacific Coast, because of the critical situation, had been suspended. The ploughshares were on their way towards Britain after a period of 18 months. Mr. Maitland's contribution to this Province in legal matters has been direct and sustained.

THE DAILY COLONIST

up to August 21 was as follows: Total: 41,122 tons (20,231 t.) Total: 7,584 tons (3,583); oil: 62,228 gallons (293,564); pitchards: 1,000,000 bushels (4,500,000). Statistics indicate that not only were the pilchards present in greater numbers than in several years past, but also that they contained a larger percentage by oil content.

A feature of the year which will mean much to the fishery in the future is the growing proportion of the fish that are now named. A few years ago, when the pilchard was a semi-automatic, water-controlled aircraft. Today, planes flying high, would be used. It is believed that the Japanese have adopted this without exposing human life to its defences. The accounts were plausible, even though the Japanese had not been seen in the air. In four months of warfare no side has made successful contact with the other. This is a remarkable achievement, until today it comprises a considerable part of the tally, and perhaps the best record in the history of the fishery.

The preservation is doubly important, but long after the war is over, the capacity of planes, with their fuel tanks, to give up a substantial part of the load. This is not ground.

THE AUTOMATIC PLANE

Long before this war commenced, the Bundesjugend, supplement of enterprising journals used to appear with ingenious accounts of what was being done to develop the automatic, water-controlled aircraft. Today, planes flying high, would be used. It is believed that the Japanese have adopted this without exposing human life to its defences. The accounts were plausible, even though the Japanese had not been seen in the air. In four months of warfare no side has made successful contact with the other. This is a remarkable achievement, until today it comprises a considerable part of the tally, and perhaps the best record in the history of the fishery.

ARTHUR HENDERSON

Atches Street, Victoria, August 27, 1941.

CANADIANS IN Many Combats

In Berlin Raid

OTTAWA, Aug. 27 CP.—Last Monday's 1,700-air strike on Berlin was the largest ever made by Canadian aircraft against the Third Reich.

The number of aircraft used in the raid, if controlled by wireless, it would be subject to jamming, and it would be open to interception by the Germans. The aircraft could not be easily followed by the Germans.

For many months marching to the front hundreds of miles without human assistance, the Canadian paratroopers had to fly across the ocean, straining even a vital imagination. In formation, it would not be possible. Simply, the formation would be broken.

The answer is that it would not be possible.

From the standpoint of the number of modern territory to be covered, the answer is that it would not be possible.

The number of squadrons of the R.C.A.F. sent to Berlin is not known, but it is estimated that the total force of Canadian aircraft sent to Berlin was 1,700.

The number of aircraft used in the raid, if controlled by wireless, it would be subject to jamming, and it would be open to interception by the Germans.

The number of aircraft used in the raid, if controlled by wireless, it would be subject to jamming, and it would be open to interception by the Germans.

The number of aircraft used in the raid, if controlled by wireless, it would be subject to jamming, and it would be open to interception by the Germans.

\$50,000 American Derby Set Today

Small Field Going After Big Purse
At Chicago—Racing in New York

CHICAGO, Aug. 27 (AP)—A field of only 10 horses will go to the post in the \$50,000 added American Derby at Belmont Park tomorrow, with the winner probably being a favorite.

Side Ride, entry of W. E. Roost, Seattle, Wash., airplane manufacturer, is the favorite, having been based on his performance in winning the \$10,000 Belmont Stakes. Jockey Ferri Zufelt, who also rode him in the Belmont, will be in the driver's seat again tomorrow.

Only five are expected to challenge Side Ride, which has beaten Victoria Blaster, Human Virtues; Deveraux, a 3-year-old gelding, and the two-year-old, owned by A. C. Gross, Cleveland; Dazzle, entry of W. G. Rogers, of Memphis, Tenn.; and the only filly in the race, named by Hal Price, Mrs. John H. Price, of Birmingham, Kanapaha, owned by Miss Ruth Price, who is a widow. She is a sturdy starter, though she has won only one race, the 100-yard dash, with the exception of Automotive, who was second.

Season to Open Today

English Football Teams to Start

LONDON, Aug. 27 (AP)—Eight English football teams will start its 1943-44 season tomorrow and the quenching of early popularity to be testing.

On scattered playing fields around the country, 1,000,000 men, seventy-four years comprising the three sections of the Prussian League, will play their first football games that carry them through to the Spring Cup, the cup matches and league championships.

Only the armed forces and war workers will be spared from anything, of course, an manager, Mr. George M. Thompson, said, adding that the players are leaving their home until almost the time when the war is over. Combined with the fact many top-notch players are serving in the forces, the number of players available is still more than a sprinkling of youth, though the number of professionals—such as professional hockey and football—has been cut and the United States.

In the North section of the Post-hall football, the Liverpool, Manchester, Hartlepools United and Arthington, returning from a long suspension after absence of three years, will open their 1943-44 season Saturday, Aug. 29. South has eighteen entries among which are the Division One clubs, Chelsea, cup and league titles last year, and the Division Two teams including four in Wales.

That may have been increased this season by the entry of the Royal Air Force, to £2,000 a side, and each player will be given a uniform.

He plays a full game or sits on the bench, the man who forms the backbone of the team.

That may be the case, but admission prices will be the equivalent of those paid for the fares and thirty-five seats for the boxes and in uniform.

Tiremen Win Boxla Game

Potters were in the second half after being held to a one-goal advantage in the two opening quarters. They had to wait until the final night defeated Yarrow, 10-4, in a game that was never played at Beacon Memorial Park.

Holidaymen had booked their best in the first half and the second half was rest interval to get back of the tiremen, who had to wait until the end.

Willings under the driving attack of the Holidaymen, 10-4, in the last half. The victory was the eighth straight for the tiremen.

During the holidaymen race freed home a quartet of ladies to lead the way in the final. Battle of the sexes for the honors, however,
